

# THE SUPERCONDUCTOR<sup>®</sup> 2

By

JPS<sup>®</sup> Labs

*The World's Finest Cables...*

The Superconductor 2 line of cables brings out all of the music your high-end audio system can offer.

INTERCONNECT

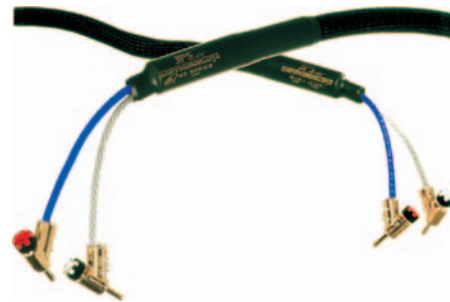

DIGITAL

A culmination of our many years of designing the best combined with JPS' Alumiloy wire, the Superconductor 2 audio, digital interconnect, and speaker cables provide your loudspeakers with all of the possible information they can resolve. Never by allowing sound that's bright or in-your-face to accomplish this, just a very lifelike, natural, and open soundstage and tonal purity with all of its harmonic structure completely intact like you never heard before. Designed primarily for the most demanding systems, these highly refined cables allow all the subtleties you've come to expect, and more.

BALANCED INTERCONNECT

NC SERIES SPEAKER CABLE

- One of the finest cables available, using premium Gold Neutrik and WBT connectors
- Enlarged Alumiloy conductor -5 gauge speaker cable, 11 gauge interconnect- for unparalleled performance, signal transfer, and clarity in the finest high-end systems.
- The best shield in the industry completely eliminates all forms of noise or hum, allowing for maximum subtle details while providing the blackest background in high-end in any length!

"With female voices the performance is simply outstanding: it seems that our favorite singers have paid us a visit into our listening room. The breath, the vibratos and the feeling of their voices is very, very close to the real live experience, so that you can tell exactly when they grasp for breath and when they open their lips to sing. Don't think this means a razor sharp kind of performance. No way! Imagine it as the most natural performance possible."

-- Lucio Cadeddu- Editor- TNT of Italy - translated from Italian.
