The new floor-standing loudspeaker with coaxial ribbon

TC 70 X

The new top class floor-standing loudspeaker! The concept of speed has an entirely new meaning thanks to the unique MOM® technology (Magnetic Optimized Motor) of the new bass chassis. It has been possible to increase the transient properties of bass loudspeakers for the first time, thus ensuring perfect harmony with the fast coaxial ribbon system. The aluminum housing is pressed in one piece from a three ton aluminum block. This provides the technological basis for a high-density loudspeaker housing with exceptional rigidity. –The qualities of the coaxial ribbon system go without saying. The audio press worldwide has proclaimed it as a milestone in loudspeaker history. The qualities of the accurately designed frequency crossover are also naturally first class.

This all together results in an exciting musical experience with a naturalness to stir all the emotions.

The new floor-standing loudspeaker with ribbon tweeter

TC 50

The elegant TC 50 floor-standing trapezoidal loudspeaker comes with the same MOM® technology in the low frequency range and the same uncompromising housing as the high-end model TC 70 X. The tweeter system used is the legendary LDR ribbon tweeter, which has been well-established for 15 years and which ensures an elegant and highly resolved sound. The new bass chassis and LDR ribbon combine seamlessly to form one harmonious unit. Regardless of whether you are playing loud or soft music, large symphonic works or the intimate music of a jazz trio, the new loudspeaker offers outstanding sound quality with every musical direction for even discerning audiophiles. Style both in terms of looks and sound is the best quality indicator of the new products.

The new compact loudspeaker with coaxial ribbon

TC 10 X

A compact loudspeaker in terms of dimensions. In terms of technology, however, a top performer with all the special features of the TC 70 X: The new powerful bass chassis with MOM® technology and the unique coaxial ribbon system. A big sound from a small cabinet – the TC 10 X turns this wish into reality. In combination with a subwoofer like the P SUB 1 MKII this speaker allows you to create a system that will leave you lost for words even in very large rooms.
