PIEGA TS-Series

The new satellite loudspeaker

TS 3

The new satellite loudspeaker is a standard setter in its class. Thanks to the unique MDS® technology (Maximum Displacement Suspension) of the new bass chassis, this small loudspeaker punches well above its size. In combination with the meticulously finished aluminum cabinet, neodymium dome and precision-designed frequency crossover, this loudspeaker is fully capable of use as a stand-alone music system in spite of its modest dimensions. In larger rooms the TS 3 can naturally be used together with a subwoofer. The cabinet with its modern lines illustrates beautifully the difference between aesthetically and professionally based design which also takes into account all acoustic aspects.

The new floor-standing loudspeaker

TS 5

The slim-line column loudspeaker with its double-bass components with MDS® technology and the same special design features as the small TS 3. For a loudspeaker with such a filigree appearance, the TS 5 offers an astonishingly solid sound which was simply unachievable before. Even in the largest rooms, all musical tastes are brilliantly reproduced with impressive accuracy. The TS 5 opens up a door to music. Trust in what your ears tell you and listen for yourself...

The new center loudspeaker

TS 4 C

With the convenient TS 4 C center loudspeaker you can create a home cinema system with a really live character. This loudspeaker also boasts the impressive design features of the new TS Series. Due to its symmetrical radiation properties, the TS 4 C offers excellent use as a rear loudspeaker.
